	The names of all the Bishoprikes in England & Wales.	102
	The names of the Barriars and Parishes in London.	105
	All the principall Faires in England	107
	All the Faires of wales never before printed.	116
	The High waves from one towne to an other much higher then hath bene heretofore set forth.	123

A perfect rule to know the Lawe dayes in  
the Court of Arches, the audience of Can-  
terburie, and the spirituall and Ciuell  
lawes throughout the yeare.

Michaelmas Termme.

S.Luke.	All Saints	S.Andrew.
S.Simon & Jude.	S.Martine.	The conception
S.Faith.	Edmond K.	of our Lady.
S.Edward.	S.Katherin.	

þt must well understand, that the first day en-  
suing, each of the feasts set downe before euery  
Termme, the court of the Arches is kept in the fore-  
noone at Bowe church: and in the afternoone the  
same first day, is kept in Southwarke the Admirall  
Court for ciuell causes.

The second day after each of these feasts, the Au-  
dience court of Canterbury, is kept in the Consisto-  
rie in Paules in the forenoone, and the priuilegious  
court of Canterbury is kept in the same place in  
the afternoone the same day.

The third day following any of those feasts, the  
Bishop of Londons Court of Consistorie is holden  
in Paules in the forenoone, and in the same place is  
the court of the Queenes highnesse commissioners  
þpon appeals, and the Court of Dilegates holden  
in the afternoone the same third day.

Hillary Termme.

S.Hillarie.	S.Scolastice.	S.Chadde.
S.Wolftane.	S.Valentine.	Perpe. & Feli.
Conser.of Paul.	Ashwednesday.	S.Gregorie.
S.Blaſc.	S.Matthias.	An.of our la.

Understand that the fourte feasts of this  
Term be never changed, but are certaine, the other  
are sometime kept, and sometyme omitted, after the  
course of the yere altered. And if it so chance, that  
one of those feasts be Ashwednesday, that are after  
Saint Blasie day, so that the same law day after Ash-  
wednesday cannot be kept, because the Law day of  
the other feast doth light on the same day: the se-  
cond law day after Ashwednesday shall be kept, and  
the other omitted.

And if the lawday after Ashwednesday be the  
next day after S. Blasie, then shall all and every of  
those dayes bee obserued in order, as they may bee  
held conueniently.

And note, that although Ashwednesday be the viii.  
frayder, yet it hath no certaine place, but is chan-  
ged as the feast of Easter causeth it.

### Easter Term.

The xv. day after Easter.	Gordian.
Saint Alphege.	Saint Dunstone.
Saint Marke Euangelist.	Ascension day.
Imacion of the Crofde.	

In this Term, the first sitting is always kept  
the Monday being the xv. day after Easter, and so  
after the feasts here noted, which shall next follow  
by course after Easter, and the like space being kept  
betweene other feasts, the rest of the Law dayes are  
kept the third day after the Ascension, which is the  
last of this Term. And if it happen that the As-  
cension day do come before any of those feasts afore-  
said, then they are omitted for that yere. And lik-  
wise, if any of those dayes come b. fore the xij. day  
after Easter, those dayes are also omitted.

Trinitie

## Trinitie Terme.

Trinitie Sunday. S.Borulph, S.Swithin.  
 Corpus Christi. S.Iohn. S.Margaret.  
 Bonifac Bishop { S.Paul. S.Anne.  
 S.Barnabe. Tr.S.Iho.

Remember that the Lawe dayes of this Terme  
 are changed by the meanes of Pentecost, and the  
 first sittynge is holden always the first day after  
 Trinitie Sunday, and the second lawe day shal-  
 den the first day after Corpus Christi day except it  
 fall on some day aboue named, which chanceth  
 sometime, and then the sittynge day is kept, and after  
 the second sittynge account four dayes or therabout,  
 and then looke whiche is the next feast, and the first  
 lawe day after the sayd feast, shall be the third sittyn-  
 gion, the other lawe dayes follow in order, but so ma-  
 ny of them are kept, as to the time of the yeare is  
 thought meete.

Note generally, that every day is called a lawe  
 day, that is not Sunday or holiday, and that if the  
 feast day beeinge knowne of any Court day in any  
 Terme, and the first or second day following bee  
 Sunday, then the Court day is kept after the sayd  
 holyday or feast day.

First of all, these dayes are not altered, except  
 they light on Sunday, or some Holyday, and every  
 day is called a Lawe day, unlesse it bee Sunday or  
 holyday.

Anc-

8 A necessary and perfect rule to know when  
the Termes begin and end: and how many  
returnes are in every Term.

Eight dayes before any Term be,  
The Exchequer openeth for certainties  
Except the Term of Trinitie:  
That openeth but fourte dayes before truly.

Hillery Term beginneth the 23. of Januari,  
If it bee not Sunday, then the next day after, and  
ende. h tō 12. of February.

Octabis Hillarii, } Craft. Parifica.  
Quind Hillarii, } Octabis Purific.

Easter Term beginneth xvii. dayes after Easter,  
and endeth 4. dayes after Ascencion day.

Quain. Paschæ, } Merrie } Quinque Paschæ.  
Tres Paschæ, } Paschæ, } Craft. Ascencion.

Trinity Term beginneth the next day after Corpus Christi day, & endeth the wednesday fortnight  
after. Note that Corpus Christi day is alwaies the  
Thursday after Trinity Sunday.

Craft. Trinitatis, } Quind. Trinitatis.  
Octab. Trinitatis } Tres Trinitatis.

Syngelmas Term beginneth the ninth of October, if it be not Sunday, and endeth the 28. day  
of November.

Octabis Michaeli, } Craft. Animarum,  
Quinden Michaeli: } Craft. Martini,  
Tres Michaelis, } Octabis Martini,  
Merrie Michaelis, } Quod. Martini.

In this Callender following, you shall often  
times finde these letters B and E. The which signifi-  
e such dayes as the Egyprians note to be dan-  
gerous to begin or take any thing in hand, as to take  
a journey, or any such thing.

Jant-

Januarie hath 31. dayes.

The Moone 30.

9

Warめ maates this moneth convenient be,  
white wine also as wholiome is :

Fle flouth, hewe te drinke, be ruled by me;  
bleed not, but banke, forget not this.

# An Instruction for the perfect understanding of the manner and order of the computati- on, and other Tables here- after following.

The order of this Booke, and  
the matters therin contained,  
are as followeth.

First herein is a perfect rule  
to know the beginning and  
ending of the Termes, both  
of the Civill Law, and the  
common Law.

Then followeth a Kalender,  
wherein are observed the said saints dayes, not of su-  
perstition, as though every of them mentioned in the  
said Kalender were a Saint, (for of some is knowne  
the equivallis: neither if they were all Saints, are  
they therefore placed in this Kalender,) but because  
it hath beene a custome of suncient time to vse their  
names, in signifying and making certayne the dayes,  
times, and Termes of the yeare, as by the dating  
of divers old Deedes, Evidences and Recordes  
will appear. And because the same custome is  
yet remayning in the returning of writtes and  
processes, and also is commonly vsed in the noting and  
setting forth of the principall faires and markets, & all  
the seasons of the yeare, those names serue wel for thy  
purpose, and therfore might not conuenientlye have  
beene left out. And unto the said Kalender are added  
the Calendys, Mones, & Ides, because divers Eviden-  
ces are dated on those dayes and by those words, and  
thereunto also are added, the vigils & festinall dayes  
more

## The Instruction.

moreouer, the very degree & signe that the sunne is in every day of þ yearre, according vnto his middle moone truly suppitated, so that having this booke there shall be no occasion to call for any other Calender.

Then beginneth the Computation of yeares, Wherein is to be noted, that every page therof is divided into 7. severall columnnes or places as may appeare by the titles ouer every of their heads In the first place are the yeares of our Loide. in the second the Prime: in the third the Exact: in the fourth the Dominicall letter, and the leape yearre, whensoeuer it happeneth: in the fift are the names of the Kinges as they raigned, beginning with William the Conquerour, &c. And in the same place also are the monches that every of them entred into their raignes. And in the sixte are the dayes of the monches that every of them beganne to raigne in: And the vni. and last, are the yeares that every of them raigned.

Also in the raigne of eny King, is shewed the day of his death, if he died being King, or the day of his deposition, if he were deposed, with a true account how many yeares, monches, weekes, or dayes he raigned.

And heret I thinke it meere to declare somewhat of the commodity & necessary vse of the Computation aforesaid. And for the better instruction and understanding therof, I will moone certaine questions and giue answeres to the same in such sorte, as shall shew the syder and manner therof (as it were by examples) that I doubt not, but the true and necessary vse of the same, shal plainly appere to all men.

Question

## 1 Question.

I wold know by this computation, in the fourth  
yeare of King Edward the first, what was then the  
yeare of our Lord, the Prime, the Epact, Domini-  
call letter, and the month and day that he began his  
raigne in and what day in the weke the same was.

## Answere.

Among the Kings, in the Computation following,  
setke out for King Edward the first, and then looks  
for the 4. yeare of his raigne, & there it appeareth to be  
the yeare of þ Lord 1275. the Prime 3. the Epact 3.  
the Dominicall letter F. the month that he beganne  
his raigne in November, and the 16. day, which day  
that year was Saturday, as is easie to be knowne if  
you looke in the Kalender for the 16. day of Novem-  
ber, accounting F. for Sunday, then that day must  
needs be Saturday, and so of all other the like.

## 2 Question.

An Enqueste dated the 15. Kalendas of December  
in the 3. yeare of R. John, I wold know what day of  
the month the same was, & how long it is since.

## Answere.

Fyf looke in the Kalender in the month of  
November for the Calendas of December, and there  
you

you shall find the xxv. Calends of December is on the xvii. day of November. Then seeke in the Computation for R. John, and you shall find that the third year of his raigne was in the yeare of our Lord 120. And then set downe this yeare of our Lorde, wherein the question is asked, which is 1571. & take out thereof 120, and there remayns 370. And so it must follow that upon the xvii. day of November next, it shal be sixten y third yeare of King John 370. years and thus of the like.

## 3 Question.

An Evidense dated the second Sunday in Lent, in the 4. yeare of King Stephen, I would knowe in what yeare of our Lorde the same was, and also in what moneth, and on what day the second Sunday in Lent was then.

## Answeare.

First looke among the Kings for King Stephen, and when y<sup>e</sup> have found him, then looke for the 4. yeare of his raigne, there you shall finde the yeare of our Lorde to bee 1138. and the Prime 18. and B. the Sundayes letter. Then goe to the Table that teacheth to knowe Easter day, and all the moveable feastes, which Table you shall finde in the 64. page.

And there vnder the Title of the Prime, looke among these numbers for 18. When you haue found it, looke downward from the line wheres the Prime standeth, and looke for the next B. in which that yeare was the Sundayes letter. And when you haue found B. goe forward in the line and there you shall finde the 20 day of Feb. to be that yeare.

yeare the first Sunday in Lent, and therunto pue  
leauen dayes for one wooke more, and that sheweth  
that the second Sunday in Lent, that yeare, was  
the 27. day of February. Then let downe this  
present yeare of our Lord 1571. and take out there-  
of the yeare of our Lord that was then, which was  
1138. and there resteth 433. And so it doth plainly  
appere, that the 27 day of February next com-  
ming, it shall be 433. years sith the fourth yeare of  
the raigne of King Stephen. And thus you may doe  
with the like.

## 4. Question.

I haue a lease for lxx. yeares that began at Mi-  
chaelmas in the xvii. yeare of King Henry the 7.  
my desire is to know this present yeare 1571 whe-  
ther my lease be expired, or how many yeares I haue  
so come.

## Answer.

First in the computation, looke among the Kings  
for King Henry the 7. and then for the 17 yeare of  
his raigne, which you shall finde to be in the yeare of  
our Lord 1501. The which number take out of this  
present yeare of our Lord 1571. and then resteth 70.  
and so many yeares of the said lease shall be expired  
at Michaelmas next, then shall remaine 5 yeares to  
come, and so of the like.

5. Another question and plaine example,  
meete for such as cannot extract one num-  
ber out of another.

A lease dated the 6. of July, in the 31. yeare  
of the raigne of King Henry the 8, for the terms

of xl. yeares, that began at our Lady day in Lent  
then next following: I woulde howe know whether  
the said lease be expired, or how many yeares ther  
are to come.

## Answer.

First looke in the Computation among the  
Kings for King Henry the eight, and the 31. yeare  
of his raigne, which you shall finde to be in the yeare  
of our Lord 1539. Then at the next yeare follow-  
ing begin to reckon and call that one, and so tell  
dotone in order all the yeares following, and end  
with this present yeare 1571. And the whole, you  
shall finde the number of 32. And so many yeares of  
the sayd lease shall bee expired at our Lady day in  
Lent next comming. And at that time there shall re-  
maine to come of the sayd lease, viii. yeares: and  
thus you may account the yeares of any lease.

Another very plaine question or example,  
easie for all men to conceiue, and in this  
time is commonly vsed.

A lease dated the 17. of August, in the fift  
yeare of the raigne of King Edward the 6. for the  
terme of xxi. yeares, which began at Michaelmasse  
then next following. I aske the question this xii. day  
of August 1571. whether the sayd lease be expired,  
or how many yeares are yet to come.

## Answer.

First in the Computation among the Kings  
ooke for King Edward the vi. and for the fift  
yeare of his raigne, and there you shall finde the  
year

yeare of our Lord to bee 1550. Then begin at the next yeare after, which is 1551. and call that one, & so tell downward all the yeares, to this present yeare 1571., and in the whole you shall finde xxv. which platneip declareth, that at Michaelmas next the aforesaid terme of xxi. yeares shall bee fully expired. And this you may doe in the account of all termes of yeares.

Note also, that in the sayde Computation diverse of the Kings haue in the first yeare of their raigne, no yeare of our Lord. The cause is that they began in the same yeare that the former King dyed in. And therefore when you tell the yeares, do not recken them that haue no yeare of our Lord.

Note also that the yeare of our Lord after the Computation of the church of England, beginneth ever the xxv. of March, which is the day of the Annuntiation of our Lady.

Note also, that when you account any Termes of yeares, that the same terme that your lease first began in, must end and finish in the last yeare of your reckoning at the selfe same terms. And if your lease began at Michaelmas, for xxi. yeares, then it must needs end at Michaelmas the same yeare that the whole xxi. yeares are expired in, and if at Midsummer, then it must end at Midsummer the same yeare. As the last question and example doth plainly shew.

And this I trust may suffice for the instruction of the use, order, and commoditie of the sayd Computation.

Note that throughout this Computation following you must reckon but 28. dayes to every moneth.

A declaration of these two Tables.

By the first of these two tables may ye know  
the Circle of the Sunne and Dominicall Letter,  
orderly

### The Instruction.

55

siderly and perfectly for euer, any thyme past or amy  
time to come, which maister Graftons rundle could  
not do. If ye like to extend it aboue 1615 in the  
place of 1588. set 1616. and so count orderly as yet  
did at the first for any yeare to come. And for any  
yeare past, doe thus, in the place of 1615. set a 1587.  
and so count upward till the yeare yeare like: and in  
like manner do by the Table that serues to finde the  
Prime and Epact, and so are they perpetuall without  
altering, which no rundle can perdone.

Otherwise for the Circle of the Sunne and Sun-  
dayes Letter, adde to the yeare of our Lord 91. and  
divide by 28 the rest hevves the Circle of the sunne;  
Whereto in the Tables answers the letter Dominicall,  
as in this example, to the yeare 1588. I adde 91  
which makes 1579. which devide by 28. the quot-  
ient is 57. and the remaine is 1. which was the circle  
of the sunne for that yeare, wherewith I enter the  
Table, and finde that S F. answereth thereto which  
was the Dominicall Letter for that yeare beeing  
Leape yeare, and so of the rest.

The Leape yeare, as ye may perceiue by the former  
Table changeth every fourth yeare: so when ye  
may devide the yeare of our Lord into 4. parts, then  
it is Leape yeare. And the Dominicall Letter is  
changed on the 24. of Februry, as ye may perceiue  
in the Almanack by the margeant.

### The Golden number and

### Epact.

The Prime or Golden number, is a number that  
beginneth with one, and increaseth yearly one, till it  
come to 19. & then beginneth againe: it is called the  
Golden number, because it was sent out of Egypt to  
the Romaines in Letters of Gold, and thus may yet  
be seeng vpon the right side of the Table. And

find it. To the yeare of our Lord ad 1. & diuide it by 19. the rest shewes the Golden number for that yeare, and soe easie of working, ye may leue 1500. and the one which shoulde be added, and diuide the rest, as for example, by the yeare 1588. which is more then 1500. by 88. the which I diuide by 19. and there restis 12. which is the Prime or Golden number for this yeare that present is, and the next yeare shall bee 13. and so forth till 19.

## For the Epact.

The Epact or concurrent is thus found: Multiply the Prime by 11. and take away 30: and the rest is the concurrent or Epact. As for example 1588. 12. is the Golden number, which multiplied by 11. makes 132. which deuided by 30. resteth 12. the Epact for this present yere. Or thus more easilie. You must imagine three places, and on the thonne most fulle, that is the rōte of the thonne the first, and the middle ioynte the second, and the toppe of the thonne the third, then in the first place which is the rōte of the thonne, put this number 10. and in the middle ioynte of the thonne 20. and at the toppe 30. this put in memorie: by the ordene of these places shall bee counted the Golden number. As one in the first place or rōte, and two in the second or middle ioynte, and thre in the third place, then so returning, set 4. on the rōte or first place, 5. on the second, &c. till ye come to the Golden number for the yeare, for the which you sieke, and the number of that place must bee rayned with the Golden number of the yeare, and that that it comones to, shall be the Epact; so that it passe not 30. but if it passe 30. let goe 30 and the remaine is your request. As in this example I will expellte himore plaine. In the yere of our Lord God 1588. the Prime is 12. which counted by the sayd three places of

the thonne endes at the third, where this number 30. is placed, which both added, make 43. from which take 30. and there resteth 13 the very Epact for this present yeare, &c. And note that the Epact beginneth the first day of March, and the Domini-  
call letter and Prime the 1 day of Januorie.

### To know the age of the Moone.

The Epact knowne, to know the age of the Moone, yee must haue these numbers: The first is the Epact, the second the number of the monthes from March (including both monthes) the thied the dayes of that month passed, then ioyn these three numbers together if they rise not to 30. so old is the Moone, if they passe 30. 30 being leest as often as you can, they also are the age of the Moone, this is ment by the monthes that haue 31 dayes, for in them that haue but 30. dayes the coniunction is at the 29. day, and they that passe 29. (29. being subtracted as oft as may) are the age as before,

As for example,

This yeare 1588 t<sup>e</sup> the 15<sup>th</sup> of August, I would know the age of þ Moone First the Epact is 12 and the monthes from March to August are 6. and 15 the day of the moneth, which all put togeather make 33. from whence take 30 and there resteth 3 the age of the Moone that day.

Another example.

For the 18. of September the Epact being 12. the monthes 7 and dayes 18. added togeather make 37 from thence take 30 for Septem. hach but 30. dayes, and there restes 8. the age of the Moone for that day, and in like manner shall we giue to Fe. bruary 29 dayes of the Moone.

And to know the day of the change, doe thus: To the Epact adde all the monthes from March, and if they toynd together come not to 30. looke what they lacke of 30. and at so many dayes of the moneth the Moone changeth. If they bee aboue 30. and the moneth of your desire have 31. dayes, then subtract 30. but if 30 dayes, then subtract 29. and that rests take from 30. then looke what remaines, and at so many dayes of the moneth the Moone changeth.

As for example: in the yeare of our Lorde 1573. the Epact is 26. and Sept. from March 6. which added togeather make 32. from which take 29 because September hath but 30. dayes and there rest 3. which being taken from 30. leaueth 27 upon which day the Moone changeth this yeare in September. Againe to make it more plaine, I will proue by March that is past. The Epact is 26. which take from 30. because March hath 31. dayes) & there resteth 4. which is the day of the change. And to know the full or opposition, adde to the change day 14. dayes 18. hours: and for the other aspects is made this Table that followeth.

To the	$\Sigma^*$	to the	$\Sigma^*$	D. h.
confiunc-	$\Sigma \Delta$	for	$\Sigma \Delta$	4. 22.
tion for	$\Sigma \Delta$	the	$\Sigma \Delta$	7. 9.
the				9. 20.

Note for certaine that the first Tuesday every yeare after the change of the Moone in February is Shone Tuesday, which being knowne you may easily finde vpon what day of the moneth all other moonable feasts throughout the yeare do fall vpon for ever.

A Table.

59

# A table to know how long the Moone shineth, and when she riseth and setteth.

The age of the Moone increasing.		The houres • the shineth.	Her age decreasing.
C.	H. M.	D.	
1	0 48	29	
2	1 36	28	
3	2 24	27	
4	3 10	26	
5	4 0	25	
6	4 48	24	
7	5 36	23	
8	6 21	22	
9	7 12	21	
10	8 0	20	
11	8 48	19	
12	9 36	18	
13	10 24	17	
14	11 12	16	
15	12 0	15	

The use of this Table is thus; the age of the Moone once knowne and found in the side of the Table, then answering thereto, shall ye see the houres & minutis of her shineth to bee counted from the Sunne setting, all the increasing till the full, and till then the shineth in the evening, and after the full the shineth before the Sunne doth rise in the morning so many houres before the sunne riseth, as the table sheweth. And for her rising and setting, doe thus: all the increase adde to the houres of the Sunne rising, the houres found in the Table, and it sheweth the houre of her rising. Againe, adde to the houre of the sunne setting, the houre and minutis found in the Table, & that is the houre of her setting. Then after the full, for her rising doe thus: From the Sunne rising, take the houres found in the table, and the rest sheweth the rising, and from the houre of the Sunne setting, take the houres found in the Table, borrowing 12, if the Substraction cannot else bee made, and the rest sheweth the setting of the Moone.

All these aforesaid, by example shall  
be made manifest.

The 30. day of September 1588. I finde the  
moone to be 21. dayes old, wherewith I enter the  
Table, the moone decreasing, & finde seven houres  
two minutes answering thereto: so I say the  
moone shines 7. houres 2. min. in the morning be-  
fore the sunne rise, & the sunne the same day riseth  
at 6 and 12. minutes, whereto I put 12. houres  
els could not the subtraccion be made, & it makes  
18 houres 12 minutes, frō which I take 7. houres  
2 minutes & there resteth 11. houres 10 minutes be-  
fore midnight, at which instant the moone ariseth.

### Another Example

The 20. day of October 1588 the moone is 10.  
dayes olde, wherewith I enter the Table, the  
moone increasing, and finde 8. houres answering  
thereto, which shewes that the moone shines  
eight houres in the evening after the Sunne is set,  
and the sunne the same day setteth at 5. of the clocke  
15. minutes, whereto I put 8. the houre of the Va-  
ble, & it makes 13. houres 15 minutes, from which  
I take 12. which is midnight. and there resteth 1.  
houre 15. minutes, which sheweth that the moone  
shall set the same day at 1. a cloche 15 minutes after  
midnight. Likewise the same day the sunne riseth at  
6. of the clocke 41. minutes to which I adde 8. and  
it makes 14 houres, 41. minutis, from it I take 12.  
(for that is none) and there resteth two houres 41.  
minutes, which sheweth that at 2. of the cloche 41.  
minutes after none, the moone riseth, though to vs  
unseene, and so for all other times. A

A Table to know the houres of the night  
by the shadow of the Moone in  
any Sunne Diall.

D	H. M.	C
1		29
2	10. 24	28
3	9. 36	27
4	8. 48	26
5	8. 0	25
6	7. 2	24
7	6. 24	23
8	5. 36	22
9	4. 48	21
10	4. 0	20
11	3. 12	19
12	2. 4	18
13	1. 36	17
14	0. 48	16
15	0. 0	15

If you know the age of the moone, then having a sun Diall, set where the moone giueth shadow, and from the same take the houre & minutes answering to the same, if the moone increase, and the rest sheweth the houre after mid-night: but after the full, all the wane adde the same, and that shewes your desire.

## Example.

The moone being 10. dayes old and in the Diall she pointeth by the shadowe the first houre, from that I take four which answereth to 12 because it increaseth, and so resteth one, which shewes that it is one of the clocke at mid-night. Againe she being 21. dayes old pointed in the Diall the 11. houre, thereto I adde 4 hours and 48 minutes, and it makes 15. hours and 48. minutes, thence I take 12. and there resteth 3. hours & 48. minutes, the true houre of the night.

D3

A rule

10

*A rule to know the houre of  
the day, either at ore noone or after noone,  
by the beames of the Sunne, and the  
length of the Ruler, as  
followeth.*

**F**irst, yet must have a rule of thre or ffe inches long, which must bee deuided into twelve parts; as in the figure following, (which so prepared) when ye shall knowe the houre of the day, set your rule or Rasse upright vpon a plaine leuell ground, and take the full length of the shadowe, what parts of the rule it containeth: wherewith enter the Table following, and against the degree of the Sunne for that day, seeke the length of the shadowe, and in the head of the Table, ye shall see the houre of the day, either in the forenoone or afternoone, as your description shall discerne, for that the Sunne hath like altitude at like distance from the Meridian line in the forenoone ascending, and in the afternoone descending, if ye finde not the full length, take the greater number next to it in the forenoone, and in the afternoone take the lesser next thereto, And each shall give you the houre past, as in this example.

**E**x. The 23. of Nouember, when the Sunne is in the 20. of Sagittarie, I would know what houre it is by the Sunne. I set vp the diuided Rule, and the length of the shadowe is 57. partes long, that is 4. times the length of the Rule, and 9. partes more, which shewes that it is ten of the clocke in the forenoone, or two of the clocke afternoone, which is easly discerned.

**A rule**

# A rule to know, &c.

## Another.

The 5 of December, the Sunne being in the 23 degree of Sagittarie, I finde the shadow to be 52 parts, that is, foure times the rule, and foure over, which sought in the table against the 20 degree of Sagittarie, so ; it is next ) for so must y<sup>e</sup> always doe when the number y<sup>e</sup> seekke is not precisely found) and find not 52, but the neerest lesse is 47. and the next above is 62 the difference is 15. : then take 47 from 52, and there rests 4. then say by the rule of proportion, if 15. give 60. (for so many minutes be in one hour) what shall 4. give, multiply the second by the third, that is 60. by 4. and the product or osculum will be 240. which shewes, that it is either 16 minutes before 11. in the forenoone, or 16. minutes after 1. of the clocke in the afternoone, and so of all other, which in mine opinion is the most precise Horologie that may be, though at the first it seeme somewhat harde : The Table followeth.

## A Table.

A Table to know the houre of the day by  
the shadow of the Sunne.

66 A description of the order and vse of  
the foresaid Table as  
followeth.

**F**irst note, that the sayde Table is devyded  
into six columnnes or places. In the first is  
the Prime, in the second the Dominicall let-  
ter, in the third, the first Sunday in Lene,  
In the fourth, Easter day, in the fift, Rogation  
wike, and in the sixt Whitunday.

And for the better understanding of the vse  
thereof, þee must alwaies when þee desire to know  
the time of any of the sayd Feastes, first consider  
what year of our Loide it is that þee would  
know them in, and then looke the Prime of that  
year, and the Dominicall letter, and those you  
may easily finde and learne in the title of the Table  
for that purpose, that is before set forth. And when  
þee haue þe Prime and Sundayes Letter, then  
come to this Table, and it will easilly shew you your  
wchfeaste.

Example.

I wold kno w in the year of our Loide  
1588. when shall be the first Sunday in Lent, Ea-  
ster day, &c. First I goe to þe Table abovesayde,  
and there in the first columnne, I seeke out the year  
of our Loide 1588 & in the second columnne direct-  
ly against that, there I finde that year, the Prime  
to be t welle; and under that, the Dominicall let-  
ter to be S F. Then I come to the abovesayde  
Table, and first under the Title of the Prime, I  
seeke for the number of 12. And when I haue  
found the same, then I looke downwarde among  
the Sundayes Letters for the next F. that is af-  
ter the Prime, for that is þe Sundayes Lester  
þe

A rule to finde, &c.

67

for that yeare and when I haue found F. I go forwarde in that line where F standeth, and first I finde that the 24. day of FEBUARY that yeare, shall be the first SUNDAY in Lent. The 7. day of APRILL Easter day. The 12. day of MAY, Rogation SUNDAY, and the 26. day of MAY, WHITSUNDAY. And thus may you do with all other, both for time past, and time to come, for ever.

Note also that this table in the beginning sheweth the lowest month and day in the yeare that Easter and all other moveable feasts do fall on, and in the end, it sheweth the highest month and day, that Easter, and the moveable feasts doe fall on, and in the end, it sheweth the highest month and day, that Easter, and the moveable feasts do ascend unto so may it be truly said, that it is a perfect table.

And yet hereunto will I adde one Rule, which although it be in old and ryme matter, yet is it worthy of memory, and it is the same rule whereby this Table was made, which is thus.

**I**n MARCH after the first C,  
Take the PRIME where euer it be,  
The third SUNDAY after EASTER day halfe,  
And if the PRIME on the SUNDAY be,  
Then reckon that for one of the three.

A rule to know certaintely the  
Dogge dayes.

The Dogge dayes doe always beginne the 15. of JULY, and end the 17. of AUGUST.

By the course of the sunne xii. moneths.  
 By the course of the Moone xii. mo-  
 nechs.  
 Ayeare } hath } Of weekes, fifty and two , that is, 365,  
 } dayes, except it bee Leape year, and  
 then it hath 366 dayes.

A rule to know all the Vigils and fasting  
dayes throughout the whole yeare,

*With moueable feasts I will begin,  
as Easter, Ascencion, and Whitsoun even:  
The Rogation weeke in like case,  
must be kept as it commeth in place.  
And the Apostles, as Peter and Paul,  
James, Matthy with other moe,  
Andrew, Mathew; and the rest as they fall,  
Bartholomew, Thomas, Iohn Baptist also:  
Simon and Iude, and the Purification,  
the birth of Christ, and the Anuntiation,  
Ember, Fridayes, and Lent as it doth come,  
the eu'en of all Saints, and so we haue done.*

A rule to know how many dayes euery  
moneth in the yeare hath.

Thirty dayes hath Nouember,  
April, Iune, and September,  
February hath xxviii. alone,  
And all the rest hath thirty and one.

#### Exception.

But when of Leape year commeth the time:  
Then dayes hath February twentynine.

A declaration of the Tables last before mentioned. 75

If you desire at any time to know when it is full sea, or high water at any Port or Haven in England, Wales or Ireland, or in any other part of the world. If first by your owne knoledge, or the knoledge of any expert Mariner, you know when you see the Moone in such part of the firmament, hat the it is ful sea at such a port or Haven, then these Tables shall be needless for you. But if you cannot so doe & would learne, then resort to these Tables, and first consider with your selfe, how many dayes ould the Moone in the day that you desire to know the tide.

And in the middle of the said Tables, you shall find in the uppermost part of them this Title The age of the moone, and right against the day of the age of the Moone you shall finde on both sides, the places and points of the firmament, as South, South and by West, South Southwest, &c. And next vnder the lines are these letters H. m. which signilles hours and minutes. Then hauing in memo; y the age of the Moone as aforesayd, goe directly to the Title of that place of the Firmament, to which when the Moone comineth, maketh a high water, & there you shall finde the hour and minute when it is full sea in that place,

Example.

I would know at what houre it will be a full sea, or high water at London bridge, the 12. day of December next, beeing in the yeare of our Lord 1588.

E 2

Answer.

# For Ebbes and Flouds.

## Answer.

First resort ye to the former Table that teacheth you to know the age of the Moone at all times, and by that rule you shall finde, ihat the xx. day of December next, the Moone shall be 4. dayes olde: then looke upon the ticles in the uppemost part of the aforesaid tables, and among them you shal finde London.

And directly in the next vnder the same, you shall finde Southwest, the which declarereth, that when the Moone is in the Southwest, that then it is full sea at London bridge. Then goe downe the line of the age of the moone vntill you come at the 4. day, and there you shall finde at the left hand of the same, directly vnder the line where southwest standeth, these figures 6 12. which is six of the clokke and 12. minuts, at which time the aforesaid 12 day of December next, shall bee high water at London bridge.

And in the uppemost part of the aforesaid table I haue written the names of some ports, at whiche time the Moone comming to the place causereth a full sea, and vnto them ye may adde such other as you haue or shall haue any knowledge of.

A rule

A rule to know by heart what part of  
mans body is subiect to any  
of the 12. signes.

The head and face doth Aries rule,  
as Taurus doth the necke ;  
But armes and hands in Geminis power,  
doth suffer ioy or wrecke.  
Cancer doth guide the brest, the lungs,  
the ribs and smacke stont,  
Leo likewise bath bart and baske,  
thereof yee need not doubt.  
The belly and bowels Virgo hath,  
and eke the entrals all.  
The loynes, the kidneys and the reynes,  
to Libraes lot doth fall.  
The bladder and the secret parts,  
to Scorpio are the fees,  
The thighs doth Sagittary guide,  
and Capricorne the knees.  
The legs to Aquary belongs,  
to use them as he lust.  
But Pisces boldes the feete and bootes,  
and so for ever must.

78 A table shewing what signe the Moone is  
in, and shall be for ever, and also what part  
of mans body every signe doth govern, with  
the infirmities incident thereto.

Months.	Dates	Prime	The signes with the members they govern.
Febr. No.	1	3	Y The head (Dolor, head- aches, Toochath, Epiphitis.
March	2	8	Y The neck and thorac (Cox- pale and black chollier)
Decemb.	3	14	Y The neck and thorac (Cox- pale and black chollier)
	4	6	II Shoulders, arms, hands, Ache cauled of blood.

	23	16	II The legs, (Iterita nigra, Ruptures.)
I. Oct.	24	8	
	25		
	26	19	X The fette (Palley and Gout.)
	27	11	X

A declaration of the table that is on 79  
the other side, shewing at all  
times what signe the  
Moone is in.

Now, for the better understanding therof, note  
that this Table is divided into five titles, that is  
to say, into moneths, dayes, prime, signes, and go-  
vernour of the signes. Howe it yet will know  
at any time, what signe the Moone is in, you must  
first looke out the said Table among the moneths,  
for the moneth wherein you desire to bee certifiéd,  
and likewise among the title of the dayes, so; the  
day of the moneth that you desire. And when you haue  
found them, then begin at the moneth, and tell the  
same for one day, and so goe swith vntill you come  
to the number of the dayes that yet would haue,  
and note well what daye the same doth ende vpon,  
and keepe it in your memorie. Then looke for the  
Prime of that yere among the title of Primes, and  
accounting the prime for one, tell so many dayes be-  
fore you committed to memory: & then on the right  
hand you shall finde what signe the Moone is in,  
and what membre of mans-body it governeth, with  
the iustifications thereto pertaining.

### Example.

I would know the eight day of December  
next, in the present yere of our Lord 1588.  
What signe the Moone will bee in. First I looke  
in the aforesaid Table, and among the title of  
the moneths, and there I finde December, placed  
against the figure 4. which is the title of dayes,  
and there I beginne to reckon, and call that

E 4

figure

figurē of 4. one, and so tell downwardē untill I come to 8. and I finde that the same endeth upon 11. which number I kepe in memorie. Then I seeke for the Psalme of this yere, which is 12 amōg the title of Psalms and on the left side thereof standeth 11. and there I beginne againe, and call that 11. one and 10 goe downward, till I come to the number which I had kept in memory, which was 11. and on the right side therof, I finde the signe to bee Capricorne, which gouernes the knēs, with his infirmitiēs, Itching, red spots, leprosie.

A perfect, easie, and ready rule to know  
in what signe the Moone is in  
every day.

When ye know the age of the Moone, doubte  
not the same, and then divide it by 5. and the quotient  
shal shew you how many signes ye shall adde to the  
signe that the coniunction was in, and the remaine  
euery unite therof giuesth 6. degrees, which ye must  
adde to the degrees of the sunne the day of 1 if they  
passee 30. adde one signe, and the rest will shew the  
degree of the signe or very neare: but of the signe it  
will never fail for suretie.

### Example.

This present 18. of October the Moone is 23. which yowbied is 46. and deuided by 5. the quo-  
tient is 9. and 1. rest 1. that is 9. signes and 6. de-  
grees, which I adde to the signe and degrees of the  
coniunction (that is Virgo the 12. and it is  $\text{S}.$  17.)  
and so of all others.

Cer-

Certaine elections that are to bee chosen  
by the course of the Moone, in any signe of the  
zodiacke. And first of blood letting.

**L**e t blood at no time without great cause, for it weakneth and maketh way to many diseases: but if yet dw, let it be after good digestion and fasting, in any temperate day, and afterward use fine meate of light digestion, abstaining from all exercize, as bathing, watching, and carnall copulation. next consider the time of the yeare: if it be in the spring, let blood at the right side and in the haruest at the left. Thirdly the age of the person: for yong persons, from the change to the first quarter, for them of middle age, from the first quarter to the full, and for elder persons, from the full to the last quarter, and for old folks, from the last quarter to the change. Fourthly, consider the parties complexion. If it be cholerick, then let the moone be in 69 in the last hause  $\text{H}.$  If it be slegmatike in  $\text{V.}$  or  $\text{X.}$  If it be melan, in  $\text{I.}$  the first part, or  $\text{II.}$  But if he be sanguine, let the moone be in any of the aforesayd signes, only beware you let not blood in any member when the Moone is in the signe that ruleth the same, neither the day of the change, nor the day before, nor the day after for that were perillous.

The best times by drincks / Scorp.  
to purge, is that by elecuen. Luna in Cancer,  
it me be temporat by pilles. pilles.

To enter bathes for hot diseases. Scorp. Can. Pisc.

For cold diseases, Aries, Leo, Sagit.

To stop fluxes Rewmes & Lares Laur. Vir. Capri.

To take preparatiues, Aries, Leo, Sagit.

To take vomits, Leo. Aries, Capri.

To take gargarises, Aries, Cancer, Capr.

To take Glisters, Libra, Scorpio.

**G**ood to drawe  
comfort Recettive. { the Spone } **VII.**  
the ber. { Digestive. } in **II.**  
the Expulsive. **Sym.**

To cut haire that they may grow better, Taurus  
Virgo, Libra, and Luna increasing.

To gelde o; lib Cattell, Sagitari, Capri. Pisces, and  
Luna decreasing.

**G**ood to soin o; set, Taurus, Cancer, Virgo, Libra,  
Capri, and Luna decreasing.

To graffe or plant, Taurus, Aquarius, and Luna in-  
creasing.

To cut Glines, Aries, Scorpio, Libra, and Luna in-  
creasing.

To fell wood for Timber, from saint Barnabas  
day to None, till the 1. Calend. of January, in the  
lunke of the Spone.

To fell her wood that the Rothe may come spring,  
from the change to the first quarter.

To remoue grafts o; young trees, at the last quar-  
ter of the Spone.

These two tables following, shall perfectly shew you the break of the day, sunne rising, length of the day and night artificiall, the setting of the Sunne, and twilight for the whole yeare, whereby yee may know the planetarye houre, and what Planet doth raigne any day or houre for ever: the use is thus.

In the first colome looke for the moneth where in yee are descending or ascending, then in the next colome thereto finding out the day, or the next thereto, and right there agaynst toward the right hand if yee descend, yee shall finde the houre and minute of any of the aforesayde in the colomme vnder the title thereto but if yee ascend by the right side of the Table, then looke towardes che left, and do as before, the worke is easie, it needes no example at all: but because I promised to make it as plaine as might bee, I will shew an example sufficient, and that is thus: The 22. day of September, I would know all that is aforesayd: I enter the Table descending by September, and finding the 22 day againt the same in the colloms vnder the title, break of the day I finde 4. 20. which shewes there at 4. of the clok 20. minutes is the break of the day. In the next 6. 18. which shewes the sunne rising, in the third collome 11. houres 24. minutes, the length of the day, and 12. 36. in the fourth, the length of the night 5.42 the setting of the sunne, and 7. 40. the twilight, or the going downe of the day light, and so of all other dayes.

Mars.	0	11	8 12	9 0	10 1	10 2	Saturne	

The vse of this Table is thus:

**V**Nder the day of your request, seke the houre that you desire, then on the left side, right there against. Hal ye see the planet that gouerns that houre by day, and at the right side, the Planet that rules it by night, as thus. On Thursday the third houre of the daye rules 0. and the 8: houre of the night gouerns 1, and so of the rest, so it is plaine enough.

A

*A Table to know the length  
of the Planetary hour, from the shortest  
day and longest night, till the longest day and  
shortest night, of what length soever the  
day or night be.*

*The vse of this Table.*

**K**now the length of the day or night that you require by the Table proceeding in hours and minutes, & therewith enter this Table, the hours at the side, and the next minute at the head, and then descend right against your hours, and there in the common angle, yet shall stand the hours and minutes, or minutes, only bat the Planet reignes by the hours of the clockes.

As for example.

The 21. of June, the day is 16, hours, 20. minutes, where with I enter this table as is shewen,

and by the angle I finde 1 houre, 22 minutes, which sheweth that a Planet that day rules an houre and a quarter and 7 minutes of the clockes. Also for the same night I finde it to be but 7 hours and 40 minutes, wherewith I enter this table w<sup>i</sup> h 7 at the head and 36. at the head (for that is the nearest) so in the common angle I finde but only 38 minutes which sheweth that a Planet in that night, rules but halfe an houre and 8 minutes of the clocke, and so of the rest.

### A declaration of this Figure following.

But for more easie in account, I haue devised this figure following, which presently shall shewē you the houre of the Planet by day or night at all times. The pettemost margin whereof, is deuided in 24. partes, representing the 24. houres of the Equinoctiall or clockes, which euer are of 60. minutes, and every houre is deuided into fourteene parts, within the same haue you the houres artificiall, or houres of the Planets, as well for the night as for the day, the Orizon line deuiding the same which for the better knowledge is bedecked with shadowes, and all that is aboue the same is counted day because when the sunne comes vpō the line in the East, it is day, for then begins the day artificiall: And when the Sunne comes to the same in the West, he脱parts from our sight, and then beginnes the artificiall night. So likewise all vnder the same is night, and therefore printed blacke in the center, wherein must be put a thred with a knot, or a small Bead, to be remoued at pleasure.

The

The vse thereof is thus.

Know that the Table for that purpose, the rising of the sunne for the day yeē desire, and vpon the same hour and nearest quarter, in the vtermost margent lay the thred, remouing by and downe the knot or head, till it lye vpon the Orizon line, there-holde it stedfast at the centre ende, and remoue your other hand unto the houre of the clocke, called the houre of the daye, eyther before noone or after, then the knot among the planets houres, shall shewe the iust houre of the artificiall day, expresse the figures of Arithmetick, wherewith enter the Table of the Planets, with the

day at the head, and so the number of the houre shall shew you at the left side, the Planet that rules by day at the right side, the Planet that rules the same houre by night.

## Example.

The xx. of Oct ober beeing Tuesday, I would know what Pan et raignes at 3. of the clocke 30 minutes after noone. By the table of the sunne rising, I finde that the xi. day of October the sunne riseth at 7. of the clocke 15 minutz, which sound in the figure, I put the thred thereto, and set the knot on the oxpon, then remoue I the thred to 3 of the clocke 30. min. after noone in the margent, and the knot shewes the xi houre of the artificiall day, where with I enter the table of planets under Tuesday and right against xi. at the left side is 2. which rules that present houre.

Againe at 5. of the clocke at night, I would do the like, I remoue the thred to 5 in the margent, and the knot amongst the hours of the night, shewes the sixt houre of the artificiall night, where with I enter the table as before, and find right against 5. at the right side 1. which rules that present houre. &c.

This done if you desire to know how long the Planet of that houre hath ruled, or how long he shall rule, doe thus : set the thred to the time that ye desire to know the Planets houre, and if the knot light vpon the line that deuides the artificiall hours, then and at that instant beginnes the Planetary houre : but if the knot fall within the space, remoue your knotte to the line preceding, then shall the thredde in the margent shew at what time the Planet beganne to raigne, then remoue the knotte to the line following, and the thred in the margent will shew you the instant of the clocke when the Planet shall cease to rule, whereof

Wheneof take this example.

Sunday the xxviii. day of March, the sunne setteth at 5. of the clocke 3. minutes, and at 15. minutes past 9. of the clocke I finde by the aforesaid rules of the Moon to raign at that instant, because the knot falleth in the mynd betwene the lines, then set I the knot back to the line, and the thorde falleth upon 30. min. after 8. then began Luna to raigne, Then remoue I the knot to the line following, and the thorde doth marke in the margin 45. minutes past 9. of the clocke, and then doth the Moon end her dominion for that time, till her course returne, then take 8.30. out of 9.45. and there resteth 1.15. and so long raigned a Planet at that time.

### The properties and effects of the Planets.

Aurum is an enemy to humane nature, a destroyer of life, malevolent, cold, dry earthly, masculine, of the day, the greater fortune of mans body, hee rules the right eare, the spleane, the blacher, and the bones, of humours melancholy mixt with flegme, of persons, old men, husbandmen, miners, masons, tanners, Jewes, envious persons, stuborne, solitary, still, leane, berdlesse, couetous, gluttons, deceiuers, husbandry, fruits of the earth, mines of mettalls, treasures, buildings heritage of the dead, possessions, prison, and hath of colours blacke. The greatnessse of his body is 91. times so big as the earth, the quantity of his beames are 9. degrees toward and backward. He makes his

resolution or passeth thorow the Zodiacke in 30. yeares. his fewest yeares are 30. his meane 43. his greater 57. & his greatest are 465. yeares he is expressed in likenesse of an old man leaning on a stafe or holding a sickle in his hand, thus.

Jupiter is the greater fortune of the day, hot and moist, benenolent. He rules in mans body, the liver, lighes and longs, the ribs, the arteries, the blood, the seed, pulses, and the left eare. Of humours, the sanguine, he signifieth bishops, prelates, lawyers, judges, shamefast, gentle and humble, iust, honest, true, faithfull, liberal, vertuous, and religious gouernours of cities, & rich men, ecclesiast, call dignities, religion, justice, honesty, prayse. Of colours biew, or ermine. The greatnessse of his body is 95. times so much as the earth: the quantitie of his beames are nine degrees, hee ends his course in 12. yeares almost: his fewest yeares are 12. his meane yeares are 45 and a halfe, his greater yeares are 79. and his greatest yeares of all are 428. And to shew forth his thre folde thunder bolts, hee is expressed with thre draughts thus. which is not much unlike a mace or scepter of honor, as some very flicke haue imagined.

Wars is the lesser, unfortunate, masculine, of the night, immoderately hotte and drye. Of mans body he governeth the gall, the veynes, sinewes, stones and the left eare: of humours the chollerike: and of colours redde, hee signifieth of persons, the war, rors, seditious, disdainefull, coniurers, or conspirers, trefull cheeres, cruell, bold, frenerent, murtheters, Captaines, Chirurgians, Turkes, terrible, vsolent, carelesse, workers in sicke workes, Gunners, and founders, warre, strife, discention, tyranny, violence, armoy, Alcumy, and all things wrought and done by the fire. The greatnessse of his body, is once as bigge as the earth, and halfe so bigge

bigge againe, and one eight part of the same. The quantity of his beames are 8. degrees. Hee ends his course in 2.yeares almost, his fewest yeares are 15. his meane yeeres 40. and a halfe : his greater yeares are 66. and his greatest yeares are 264. and because he is the God of warre, he is expressed with a dart, thus .

Sol is the light and lampe of heauen, and glues life naturall to all things , hee is an indifferent Planet moderately hot and drye, masculine of the day , fortunate by aspect , but infortunate by corporall coniunction . Hee rules of mans bodye, the baine, the marrow, the loynes , the right eye of a man, and the left eye of a woman. Of colo'res, doreye yellow or golde colour. Hee signifis Kings, prin'ces, magistrates, famous persons , desirous of honour , and ambitious. Also Kingdomes, Empires, nobilitie, magnauitie, fortitude , glory, rule, hon'or. The greatnessse of his body is 166. times so bigge as the earth, and some what moxe. The quantity of his beames are 5. degrees . Hee passeth thorough the 12 signes in 365. dayes, and 6. houres almost his fewest yeares are 19. his meane yeeres are 69. and a halfe: his greater yeares are 120. and his greatest yeares are 146. and because he beares the image of Apollo, hauing a golden Apple in his hand, therfore in that likenesse, or by a round circell, he is signified thus ◎.

Venus is the lesser fortune , feminine of the night, colde and moiste, tempozate, benevolent. Of mans body , shee rules the throat, pappes, bellye, reine, matrir, loynes, fat, spleene, and the buttoches. Of humors, cleame : of colours greene and whitish : shee signifieth persons the faire conditioned, the mercifull, merte, the fine, pleasant, and delightsome, the essemiate , louers , dancers , banquetters , Musicians and Poets . Also stability,

folly, loue, meccy, beauty, gifts of friends and women, mariage, dows, ornaments, jewels, lust, and lechery. The greatness of her body, is the 37 part of the earth. The quantity of her beames are 8. degrees. She endeth her course as doth the sunne; her fewest yeares are 8. her meane yeares are 45. her greater yeares 82. and her greatest yeares are 151. And because she beareth two parts one of gold, another of lead, she is express by a double draught thus & or by a looking glasse which is more proper.

Mercury is convertible, good with the good, and bad with the bad; sometimes Masculine and of the day, sometime Feminine, and of the night, hott with the hotte, and cold with the cold, moist, with the moist, and drye with the drye plannets as he is configured to any. He ruleth of mans body the mouth the tongue, the thoughts, the memorie, the hands, and the thighes, He signifieth of yec, for Philosophers, Scriveners, Merchants, Painters, Boulers of subtleties, crafty, deceitfull, wantering, lying, proud, and sornefull, Also all kind of scientes, buying, selling, contractes honest studiess, denization, and curiosite. Of colours, the skie colour, or the speckled of many colours, The greatnessse of his body is the 32000. part of the earth. The quantity of his beames are 7. degrees. He makes his revolution as the Sunne and Venus. His fewest years are 20. his meane 48. his greater yeares 76. and his greatest yeares are 460. He is figured as it were wearing a hatte or wings, thus & of els more properly by his charming rod that is environed with serpents.

Luna is naturally colde and moist, of the night Feminine, she is the carrier and deliverer of the influence of all the Plannets thow her Qib: vnts

he. She rules the left eye of a man, and the right eye of a woman, and of both, the stomacke, the taste, the wier, the belly, and the leste side. She afflicteth noble women, widowes, the vulgar sort, and those of continuall motion, as Marriners, Passengers, Legates and vagabonds. Also all things that abound in moysture, the sea, the riuers, with their ebs and floods, the studyes of histories, Embassages, Navigation, tournyng, seruices, planting, sowing, and al water workes. Of humours the cleame, of colours, white or siluer colour. The greatnes of her body, is the 39. part of the earth. The quantity of her heames are 12. degrees: she makes her passage through the Zodiack in 29. dayes and 8. hours, & curvateth the Sunne in 29. daies 12. houres, or there about. Her fewest yeares are 25, her meane yeares are 66 and a halfe, her greater yeares are 108 & her greatest yeares are 520, and because shee is commonly seene horned, or halfe round, she is figured thus .

The Dragons head, (which is the intencion made by the cutting or crossing lines of the Orbes of the Sunne or Moon) is good with the good, and bad with the badde, for if it bee ioyned with good Planets, it augmenteth their godnesse and ioyned with the evill, it doth increase the mallice and evill nature of them, and is figured thus .

The Dragons tasse, which as it is the opposite point to the head, so it is contrary in nature, for with the good it is bad, and with the bad it is good, for with whomsoeuer it is ioyned it doth diminie the operation of them, be it good or bad, and is expressed thus .

The
